

COMPONENT-BASED MODELING

Speeds the development process by dividing the model built into various pieces that fit specific functionalities.

Enables departments to share components they've built; thus eliminating the duplication effort.

Saves time during future builds because individual components can be reused in new projects.

Enables models to run in real-time which allows developers and users alike to run up-to-the second versions of each model and component. This offers the additional benefit of allowing your company to make better-informed decisions.

SUMMARIZING

1. SAVES DEVELOPMENT TIME AND DUPLICATION EFFORT
2. ABILITY TO RE-USE PREVIOUSLY BUILT COMPONENTS
3. MAKING BETTER DECISIONS WITH REAL-TIME MODELS
