

THE VALUE OF WHAT IF'S

An 'if' statement such as the ones shown below can save a company thousands of dollars:

*What and when will my company reach a breakeven point?

*What is the value of my company today and what will it be in 5 years?

*Can projections include how to create time- dependent cash flow simulations from time periods to sophisticated real-time or multi-time periods?

*Can I figure out quarterly or monthly what sales and profits will be?

*What happens to profit as both Units and Price change?

*What happens to Profits and Sales as units change?

All reports can be exported to Excel format.
